

Client's Engineer

Part 1 – Technical Management

Objective

To assist in technical management and coordination of technical activities as the Client's Engineer during the wind energy project development. The role of the Client's Engineer will be to coordinate activities of different consultants and to ensure the progress of their work. An important task of the Engineer is to use his expertise and experience from other wind farm development to identify possible wrong assumptions and to suggest corrections.

Work included

- Participate in negotiations with engineering consultants and suppliers
- Review of specifications for consultancy work and other technical services required during the development
- Participate in progress meetings and coordinate sub supplier's work
- Establish direct contacts with the technical management at the WTG manufactureres

Time frame

The work will continue during the whole project development phase

Client's Engineer

Part 2 – Tender preparation and evaluation of tender

Objective

As the Client's Engineer, Ingham Consult will assist in the preparation of the tender documents for the wind turbines or for a full turn-key tender depending on the Client's decision. The main work will be to coordinate the documentation from various sides. However, the tender documents for the WTG supply can be handled by Ingham Consult alone. Included in the scope of work is also the evaluation of incoming tender

Work included

- Define, together with the Client, the tender type and the governing standards to use
- Establish a plan for the tender documentation work
- Coordinate the production of technical tender documents
- Review of technical tender documents and assisting in putting together the tender invitation package
- Evaluation of incoming tenders and ranking the tenders

Time frame

The work will continue during the whole project development phase
